- Security & Surveillance System
- Sound & PA System

CONSULTATION AND DESIGN

With the people over 15 years of combined design experience in the fire protection industry, Deltron can aid with everything from consultation to the detailed design of complete fire protection package. Consulting with Deltron's experienced team at the preliminary stages of your project has many advantages. We will help identify any potential issues, provide budget pricing and cost saving measures and allow early coordination of building services and architectural requirements. This all helps to provide a seamless transition from the preliminary stages through to final completion of your project. Deltron believes the key to a successful project for all stakeholders is the confidence they have in their teams ability, based on experience and knowledge, to provide a quality service and product. This is something that Deltron strive to achieve with all of our clients and believe trust and strong relationships are critical to achieving this. Deltron senior management and designers are readily available for consultation and meetings to suit our clients requirements. Today's buildings are complex and full of crucial services which are vital to both daily operations and emergency situations. Deltron's biggest asset is it's staff, in particular our experienced in-house design team.

We provide integral parts of the whole process. We rely on their our knowledge and skillset to provide fully coordinated and compliant designs to the requirements of the relevant standards and satisfaction of our clients. We use the latest software and technologies to generate both 2D and 3D designs using programmes such as AutoCAD and Revit. Deltron has invested heavily in this area by employing qualified staff and upskilling existing team members to enable us to provide this service to our clients.

Fire alarm system

Not only do fire alarms save lives by providing the early detection of fires, they are an integral link for the operation of all other building services in the event of a fire. With the complex nature of buildings today, the fire alarm is a key element in helping the fire service assess, control and evacuate buildings during a fire. Deltron Trading and Services provides Fire Alarm System, including the supply, installation testing and commissioning of fire alarms (includes PAGA, PAVA, Mimic panel etc.). In commercial buildings fire alarms are not just necessary for their practical benefits, but are also a necessity by law. In order to fulfill all your legal and contractual obligations you must ensure you have effective high quality fire alarm systems. We provide the supply, installation, testing & commissioning and maintenance of fire alarm systems.

Fire Pumps and Fire Hose Reels

We offer complete installation of wet and dry riser fire hydrant systems, hose reel systems and sprinkler systems. Fire hydrant/hose reel systems as an installation of pipes, water tanks, pumps, hydrant outlets and/or hose reels in a building to provide a ready means by which a jet of water can be delivered to any part of the building for the purpose of firefighting. We provide a comprehensive range of related services including design, supply, installation, testing and maintenance.

Water & Foam - Deluge Valve Sprinkler System

The installation of a fire sprinkler system to a building is essential not only to the protection of life but the protection of assets and property. At Deltron we take this very seriously as we are the first line of defence in the event of a fire. Properly installed and maintained automatic fire sprinkler systems help save lives. Because fire sprinkler systems react so quickly, they can dramatically reduce the heat, flames and smoke produced in a fire. Fire sprinklers have been around for more than a century, protecting commercial and industrial properties and public buildings.

Portable and Mobile Fire Extinguishers

High quality fire protection equipment is a necessity for any commercial building. We are comprehensive suppliers of the most superior fire extinguishers from the most established manufacturers. We supply all kinds of fire extinguishers: Foam extinguishers, Water extinguishers, CO2 extinguishers, Powder extinguishers, Automatic extinguishers and Wet Chemical Extinguishers.

Foam used in fire protection is an aggregate of air-filled bubbles formed from aqueous solutions, and is of lower density than the lightest flammable liquids. It is mainly used to form a coherent floating blanket on flammable and combustible liquids to prevent or extinguish fires by excluding air and cooling the fuel. Foam can be used as a fire prevention, control or extinguishing agent for flammable liquid in tanks or processing areas.

Kitchen Hood Suppression System

An exhaust hood, extractor hood, or range hood is a device containing a mechanical fan that hangs above the stove or cooktop in the kitchen. It removes airborne grease, combustion products, fumes, smoke, odors, heat and steam from the air by evacuation of the air and filtration. In commercial kitchens exhaust hoods are often used in combination with fire suppression devices so that fumes from a grease fire are properly vented and the fire is put out quickly.

Clean Agent Extinguishing System

Clean Agent is stored in cylinders as a liquid. The cylinders are pressurized with nitrogen which acts as a propelling mechanism for the discharge of the agent. As the agent reaches the discharge nozzle it is vaporized and floods the hazard area as a gas. A CLEAN AGENT system can provide an effective fire extinguishing medium with modular hardware that requires minimal space for installation and a most effective means of fire suppression.

Passive Fire Protection System

Passive Fire Protection (PFP) is a critical element to any building structure. It plays a preventive role and it represents all the construction methods that allow a structure to resist a fire during a given time (this is fixed by the regulations relating to specific building types).

Passive Fire Protection methods are intended to:

- Stop the progression of fumes
- Avoid the spread of flames
- Contain thermal effects in the disaster area
- Maintain the fire stability of structural elements

These methods are known as “passive” as they work without any human intervention or external energy input. They aim to allow the evacuation of people and the intervention of the emergency services, confining the fire as long as possible in a compartmentalised space.

Deltron provides the below services in passive fire protection.

1. Fire rated doors.
2. Structural protection solutions – such as intumescent paints
3. Fire rated sealants and other fire stopping solutions.

CCTV & Surveillance System
